

How we approached it

Project

- | - t0_experiments.jl
- | - t1_experiments.jl
- | - source/

Seperate notebooks for the two phases of the project

T0 for steps 1 to 5

T1 for steps 1 to 8

A seperate source folder for Modules used by both

Step 1 – The network

Project

- |- t0_experiments
- |- t1_experiments
- |- source/
 - |- Graph.jl

Based on the example
implementation.

Constructable from the json
document

Step 2 – Calculate r

Project

- |- t0_experiments
- |- t1_experiments
- |- source/
 - |- Graph.jl

Based on the example implementation.

Constructable from the json document

Step 3 – Meta data

Project

- |- t0_experiments
- |- t1_experiments
- |- source/
 - |- Graph.jl

Based on the example implementation.

Constructable from the json document

Step 4 – The model

Project

- |- t0_experiments
- |- t1_experiments
- |- source/
 - |- Graph.jl
 - |- r.jl
 - |- data.jl
 - |- Model.jl

Based on the example implementation.

Builder pattern

Step 4 – The model

Project

- |- t0_experiments
- |- t1_experiments
- |- source/
 - |- Graph.jl
 - |- r.jl
 - |- data.jl
 - |- Model.jl

Based on the example implementation.

Builder pattern

Step 4 – The constraints

Formular(s)

Step 6 – The time factor

Project

f

- |- t0_experiments
- |- t1_experiments
- |- source/
 - |- Graph.jl
 - |- r.jl
 - |- data.jl
 - |- Model.jl

Step 4 – The model

Project

- |- t0_experiments
- |- t1_experiments
- |- source/
 - |- Graph.jl
 - |- r.jl
 - |- data.jl
 - |- Model.jl

Based on the example implementation.

Builder pattern

Step 4 – The Constraints

Formular(s)

Code

Step 4 – Variables

Formular(s)

Code

Step 4 – Lex descend

Formular(s)

Code

Step 5 – T0 Experiments

Slides for results and
problems

Step 6 – The time thing

Project

- |– t0_experiments
- |– t1_experiments
- |– source/
 - |– Graph.jl
 - |– r.jl
 - |– data.jl
 - |– Model.jl

Based on the example implementation.

Builder pattern

Step 7 – Updated Model

bounds

code

Step 8 – T1 experiments

Several slides of
results

f
